

Federally Approved State Rules - State Implementation Plan

The following table will assist you in determining which of the current state air rules have been submitted by the department to the U.S. EPA as revisions to the Indiana State Implementation Plan (SIP) and which have been approved by the U.S. EPA either as a SIP revision or a delegated authority. Those items that have been identified as being approved must be included in the Part 70 permit application as Applicable Requirements and are federally enforceable. Those rules that have not been approved by the U.S. EPA are not federally enforceable and should be included in the permit application as State-only enforceable requirements. As indicated on the first page of Worksheet 8, some sources may also be subject to local requirements, which are not addressed in this Table.

This table uses different notations to provide information reflecting the status of the rules. The following key should help with the use of this table:

IAC Citation:	This is the Indiana Administrative Code citation currently in use.
Title:	This is the title of the current rule.
Sub. to EPA:	This stands for "Submitted to EPA". If IDEM has submitted the rule to the U.S. EPA for approval, then "yes" will be indicated or the date of submittal. If not, then "no" will be indicated. In some cases, the OAQ has been delegated authority by the U.S. EPA for a rule or group of rules. Delegations of authority will be indicated by " DA ".
Approval Date:	This is the date that the U.S. EPA published its approval notice in the Federal Register. In some cases, there may be more than one approval date. For example, sometimes U.S. EPA approves portions of rules on different dates, or issues conditional approval followed by final approval.
Approved As:	Certain rules may have been approved by the EPA using a different codification (rule number), but the language contained within the rule has not changed. If this is the case, the original rule citation will be provided. If "same" is present, this indicates the current IAC citation is the citation submitted to and approved by EPA. Some entries will reflect the date of the Indiana Register that was submitted for approval.
Portions	As indicated above, the EPA may not have approved (or disapproved) a rule in its Approved: entirety. Only certain portions of a rule may have been approved and only those approved portions would be federally enforceable. Those portions that had not been approved would be State-only requirements.

When using the table, you may notice that a rule has been submitted to EPA (a "yes" is present in the Sub. to EPA column), but the columns for Approval Date, Approved As, and Portions Approved are blank. This indicates that the rule has been submitted to EPA, but there has been no action taken. In this situation, the rules identified would be **State-only** until EPA approves the rule and publishes a Federal Register notice.

Certain of the IAC rules are not included in this table. Those rules either relate exclusively to mobile sources or would otherwise not be applicable requirements for permitted sources (for example, the Public Records rule, and the Environmental Policy Act rules). It is difficult to provide complete details about every rule in a simplified format such as this. If you have questions about a specific rule, please contact the Office of Air Quality, Rules Development Section at (317) 232-8229.
